Home Trimwork is managed by a third generation carpenter, with integrated teams of experienced craftsmen. After years of serving home builders, the owner Igor Szczerba, was able to develop a team that takes pride in their work and are dedicated to the highest standards. Home Trimwork has established an excellent reputation by working directly with homeowners, top builders, and many family owned construction companies to beautify their homes. Each project begins with the representative listening to the needs of the home owner, and assisting them with ideas. A written estimate is done at the home and itemized so that the homeowner can pick one project to start if they like, or several of the projects to be completed on the detailed estimate. All work is completed by in-house craftsmen, and highly skilled crews, with each worker specializing in one trade only, bringing the best workmanship to your projects and getting it done right the first time. Their teams are very creative and understand the aspects of customizing homes to a distinctive look. Whether it is one room or many rooms, their creative ideas and customization can create a design that will fit and flow with your home's size and layout. A boring, empty room can be transformed into a warm and inviting room.
